

RYAN LOWE

Tech Lead | AI-First Development

425.320.9221 | ryan.phyter.1@gmail.com

LinkedIn | phytertek.com | GitHub | North Port, FL

SUMMARY

Tech Lead building teams of humans and AI agents to deliver scalable applications. 7+ years architecting healthcare technology serving 30,000+ daily users. Champion of AI-first development practices and agentic workflows—leveraging Claude Code, GitHub Copilot, and autonomous agents to amplify team velocity while maintaining enterprise code quality. Philosophy of full-stack ownership: from Terraform infrastructure and CI/CD pipelines to databases and user interfaces.

TECHNICAL SKILLS

AI-First Development: Claude Code (agentic tasks, test generation) • GitHub Copilot (IDE completions) • Codex (planning) • Gemini (documentation) • Autonomous agent orchestration

Core Stack: TypeScript • JavaScript • Node.js • React • Next.js • Tailwind CSS • Hono

Data & APIs: PostgreSQL • Redis • Drizzle ORM • Zod • TanStack Query • OpenAPI • REST

Infrastructure: Terraform • Azure DevOps • AWS (EKS, Fargate, Lambda) • Docker • Nixpacks • CI/CD

Tools & Practices: Bun • Biome • Git • Code Review • Type-First Development • Full-Stack Ownership

EXPERIENCE

Hugo Health | Remote

Tech Lead, Product Engineering (2020) • Software Engineer III (2019) • Software Engineer I (2018) | May 2018 – Present

- Lead teams of humans and AI agents, championing AI-assisted development across the organization with strategic multi-tool approach (Claude Code, GitHub Copilot, Codex, Gemini) while maintaining enterprise code quality standards
- Own full-stack architecture for Hugo Connect application serving 30,000+ active users, including infrastructure (Terraform), CI/CD pipelines (Azure DevOps), and application development (TypeScript, Node.js, Next.js, React)
- Built distributed EHR integration system using AWS Fargate with XVFB-enabled Docker containers running Puppeteer, implementing random IP rotation to circumvent bot detection for patient-authorized health record retrieval across Epic, Cerner, and other platforms
- Architected dynamic branching survey system with visual builder featuring custom prescription lookups, interactive body maps, and complex conditional logic
- Optimized Docker images for Next.js applications, reducing build sizes by 80% and significantly improving deployment speed
- Led AWS cost optimization through EKS cluster consolidation and Fargate container improvements, achieving faster startup times and reduced network costs

Stripe | Remote

Full Stack Engineer (Contract) | March 2018 – May 2018

- Developed reusable component library with flexible base input templates for payment processing interfaces

Salesforce Development & IT Leadership | 2013–2017

Saint Leo University • International Living Future Institute • Phillips Contracting • Lumenal Lighting

Led enterprise application development and technology operations across multiple organizations. Managed cloud migrations, systems administration, and custom Salesforce application development (Apex, Lightning Components).

Systems & Network Administration | 2005–2013

Vesta Property Services • CR Techs • Englewood On-line • Microtek

Provided IT support, systems administration, and network management. Specialized in hardware troubleshooting and infrastructure support.

AI AGENT LEADERSHIP

- **Hybrid Team Orchestration:** Lead teams where humans and AI agents collaborate effectively. Establish workflows that leverage AI for code generation, testing, and documentation while empowering human developers to focus on architecture, creativity, and strategic decision-making.

- **AI Agent Design & Deployment:** Create autonomous AI agents that integrate seamlessly into development workflows. Architect agent systems for prompt engineering, context management, deployment pipelines, and monitoring.
- **AI-First Development Culture:** Build organizational capabilities around AI-augmented development. Champion best practices for agent integration, establish quality standards for AI-generated code, and mentor teams on maximizing productivity through intelligent tooling.

PROJECTS

TTS CLI – Text-to-Speech Library — github.com/phyter1/tts-cli

Fast, cross-platform command-line tool supporting 200+ voices across 100+ languages with adjustable rate and pitch. Enterprise security scanning (CodeQL, Semgrep, Snyk, OWASP, Trivy). Standalone executables for macOS, Linux, and Windows.

Portfolio Site — phytertek.com

Built with Next.js 16 and React 19 with React Compiler enabled. Custom theming using Tailwind CSS 4 with OKLCH color space, animated UI with Framer Motion and reduced motion support.
